

In the Claims:

Please amend the claims as set forth in the following Listing of the Claims.

**LISTING OF THE CLAIMS**

1. (Currently Amended) A composition comprising:

from 30 % by weight to 80 % by weight amorphous a polyalphaolefin polymer; and

from about 20% by weight to about 70 % by weight adsorbent, said composition being essentially free of a film forming agent.

2. (Original) The composition of claim 1, wherein said polyalphaolefin polymer comprises a polymer comprising monomers selected from the group consisting of ethylene, propylene, butene, pentene, hexene, octene, decene, isoprene, terpene, vinyl acetate, styrene, butadiene, and combinations thereof.

3. (Original) The composition of claim 1, wherein said composition exhibits a melt flow time of no greater than 60 seconds at 190°C.

4. (Original) The composition of claim 1, wherein said composition exhibits a melt flow time of no greater than 15 seconds at 190°C.

5. (Original) The composition of claim 1, wherein said composition exhibits a melt flow time of less than 5 seconds at 190°C.

6. (Original) The composition of claim 1, wherein said composition comprises from about 40 % by weight to about 70 % by weight adsorbent.

7. (Original) The composition of claim 1, wherein said adsorbent comprises an adsorbent capable of adsorbing organic species.

8. (Original) The composition of claim 1, wherein said composition, when applied to a substrate and subjected to 88°C for one month, is essentially free from sag.

9. (Original) The composition of claim 1, wherein said composition passes the ASTM E1887 fog test.

10. (Original) An insulating glass assembly comprising:

a first glass substrate;  
a second glass substrate;  
a separator disposed between said first glass substrate and said second glass substrate; and  
the composition of claim 1 in contact with said separator.

11. (Original) The assembly of claim 10, wherein said composition exhibits a melt flow time of less than 5 seconds at 190°C.

12. (Currently Amended) A composition consisting essentially of:  
from 30 % by weight to 80 % by weight amorphous a polyalphaolefin polymer;  
from about 20 to about 70% by weight of an adsorbent selected from the group consisting of moisture adsorbents, volatile organic adsorbents, and combinations thereof;  
from 0 to 10% by weight tackifying resin; and  
from 0 to 5% by weight antioxidant.

13. (Original) The composition of claim 12 consisting essentially of said polyalphaolefin polymer and said adsorbent.
